State Police Launch Real-Time Translation by Axon

The Delaware State Police is excited to announce the launch of Axon’s Real-Time Translation, a feature built into body-worn cameras to help troopers communicate with community members who speak different languages.

Launched earlier this week, the technology will help troopers overcome communication barriers with real-time, two-way audio translation in more than 50 languages. It will support everyday interactions, including traffic stops, calls for service, and community engagement.

> *“Effective communication builds trust between law enforcement and the communities we serve,” **said Colonel William D. Crotty, Superintendent of the Delaware State Police.** “Everyone deserves to be heard and understood, and this technology helps ensure language is not a barrier to the service and protection they receive.”*

The Delaware State Police remains committed to enhancing the quality of life for all Delaware residents and visitors, and this technology is one of many steps toward achieving that mission.
